

NEXT LEVEL BUDFLOW®

THIS IS WHAT WE MEAN BY
CONSTANT IMPROVEMENT.

KEY FEATURES

LOW SHEETED PANELS

- Low 33.5" sheeting on the first panel cattle see upon entering gives cattle the perception they are escaping rather than entering an enclosed space
- Sheeted panels allow the operator to utilize point of balance handling techniques without having to be inside the tub

ADDITIONAL PANEL

- The NEW 3E™ BudFlow® includes an additional low-sheeted panel to the side of the alley entrance

USING LIGHT TO CREATE FLOW

- The low sheeting on the panels allows cattle to see more light, ensuring they will enter and exit the tub smoothly

WHY 3E™?

3E STANDS FOR: EASY ENTRY & EXIT

HOW IT WORKS:

EASY ENTRY OCCURS BECAUSE

- Cattle have a clean line of sight through the tub when they enter
- The panels use light to draw cattle into the tub
- The low sheeted panels utilize cattle's natural instinct to walk towards a place where they believe they can escape

EASY EXIT OCCURS BECAUSE

- If a stubborn cow pauses by the exit of the tub, the second cow can take charge and continue flow of cattle out of the tub
- Limits the likelihood that handlers will need to use the crowd gate to move cattle into the system
- Additional light as cattle are turning back gives cattle the impression that they are escaping yet again
- Extra space to the side of the alley prevents stalling and backing up
