

# POST-CRUSH CATTLE-DRAFTING

## A SAFER WAY TO SORT CATTLE

Sorting livestock after the crush is safer than manually separating them in a holding pen. Post-Crush Cattle Drafting enables operators of any skill level to easily sort cattle after the crush using the flow established by running cattle through an open system.

### BASED ON BASIC PRINCIPLES OF CATTLE BEHAVIOUR

Cattle can only process one main thought at a time.

- Less distractions in a cattle handling system than in an open pen

Cattle want to remove pressure.

- Cattle are focused on escaping when placed in a handling system

### BENEFITS OF POST-CRUSH DRAFTING

- Safer for the rancher because the equipment serves as barrier
- Ranchers of any skill level can do it
- Less distractions for cattle
- Better flow because cattle are motivated to escape
- Saves time and effort because it only requires controlling the gate
- Added returns to your investment in a cattle handling system
- Time saved is money earned

*To Establish Draw and Constant Flow, use:*

- 3E BudFlow® Cattle Forcing Pen
- Adjustable Easy Flow® Cattle Race Systems
- Your choice of 400 or 700 Series cattle crushes

*To Draft Livestock After The Crush, use:*

- Post-Chute Crush Draft Gates with a Cattle Sorting Race
  - Easily attaches to all Arrowquip crushes & yoke gates for one-man operation
  - High-sheeted 4' sides eliminate distractions
  - Pulley system allows for easy diversion
  - Draft Gates open fully on both sides for animal head access and passing through the system
